  - Google Suite
  - Terminal

Projects

Date Night at Home | *Github Repository* | *Deployed Application*
A simple app that can be used to generate three restaurants in the user's area based on user preferences.
Skills used: Server-side APIs (Open Movie Database, The Movie Database, Google Places), JavaScript/jQuery powered HTML and CSS with a responsive web application

Day-Planner | *Github Repository* | *Deployed Application*
An app that allows the user to save hourly to-do list items and saves the items to local storage. When the user returns or refreshes the website their saved items will appear on their planner.
Skills used: JavaScript/jQuery powered HTML and CSS with a responsive web application, moment.js, localStorage

Password Generator | *Github Repository* | *Deployed Application*
An app that can be used to generate a password for the user based on preferences of characters used in the password.
Skills used: JavaScript/jQuery powered HTML and CSS with a responsive web application
